

## average ESS container price per 5kWh in Chile

How much battery storage does Chile have? Chile has an operational installed capacity of approximately 1GW in batteries, and another 3GW is under construction. Battery storage has been largely financed by bank lending in recent years, but we believe larger projects could increase the scope for bond financing. Will new solar assets in Chile have storage components? New utility-scale renewable and PMGE assets in Chile (most of which are distributed solar plants smaller than 9 MW) will likely all have storage components moving forward. Are battery energy storage systems a viable alternative for Chilean power producers? With transmission lines at overcapacity and permitting delays slowing the development of new grid infrastructure, battery energy storage systems (BESS) have surged as a profitable alternative for Chilean power producers. How much does an ESS system cost? Increased competition in the commercial ESS space Government incentives (e.g., tax credits in the U.S. and Europe) make systems more affordable. For example, in , a 100 kWh system could cost \$45,000. By , similar systems could sell for less than \$30,000, depending on configuration. How many Bess projects are there in Chile? This momentum is reflected in the data: AMI estimates that there is a 7.7 GW pipeline of BESS projects in Chile, far and away the most advanced front of the meter (FTM) storage market in Latin America. 1 Only 505 MW of BESS projects are currently operational in the entire region. Why are project finance transactions increasing in Chile? Fitch Ratings-Sao Paulo/New York-01 April : Project finance transactions in Chile are expected to increase due to the recent commissioning of large battery energy storage systems (BESS), Fitch Ratings says. This should balance electricity supply and demand while reducing price volatility for renewable energy generators. We expect price differentials in Chile to fall as BESS-installed capacity grows and new transmission comes online adding more uncertainty to long term arbitrage revenues. Such fees generally vary from US\$1,000 to US\$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are This momentum is reflected in the data: AMI estimates that there is a 7.7 GW pipeline of BESS projects in Chile, far and away the most advanced front of the meter (FTM) storage market in Latin America. 1 Only 505 MW of BESS projects are currently operational in the entire region. Nearly 2 GWh of In , the typical cost of a commercial lithium battery energy storage system, which includes the battery, battery management system (BMS), inverter (PCS), and installation, is in the following range: \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region La Bater&#237;a Litio 5kWh Escalable Sistemas ESS es la opci&#243;n ideal para quienes buscan una soluci&#243;n de almacenamiento de energ&#237;a eficiente, escalable y confiable. Con una capacidad de 5 kWh por unidad, es perfecta para aplicaciones residenciales, comerciales y proyectos de energ&#237;a renovable de menor As a start, CEA has found that pricing for an ESS direct current (DC) container -- comprised of lithium iron phosphate (LFP) cells, 20ft, ~3.7MWh capacity, delivered with duties paid to the US from China -- fell from peaks of US\$270/kWh in mid- to US\$180/kWh by the end of . The primary price In today's market, the installed cost of a

## average ESS container price per 5kWh in Chile

commercial lithium battery energy storage system -- including the battery pack, Battery Management System (BMS), Power Conversion System (PCS), and installation -- typically ranges from: \$280 to \$580 per kWh for small to medium-sized commercial projects. For Chilean Battery Energy Storage Systems Stabilize Energy We expect price differentials in Chile to fall as BESS-installed capacity grows and new transmission comes online adding more uncertainty to long term arbitrage revenues. Battery Energy Storage Systems (BESS) in Chile New utility-scale renewable and PMGE assets in Chile (most of which are distributed solar plants smaller than 9 MW) will likely all have The Real Cost of Commercial Battery Energy Storage But what will the real cost of commercial energy storage systems (ESS) be in ? Let's analyze the numbers, the factors influencing them, and why now is the best time to invest in energy storage. Bater#237;a Litio 5kWh Escalable Sistemas ESS La Bater#237;a Litio 5kWh Escalable para Sistemas ESS es la opci#243;n ideal para quienes buscan una soluci#243;n de almacenamiento energ#233;tico What goes up must come down: A review of BESS As a start, CEA has found that pricing for an ESS direct current (DC) container -- comprised of lithium iron phosphate (LFP) cells, 20ft, ~3.7MWh capacity, delivered with duties paid to the US from China -- fell from peaks of The Real Cost of Commercial Battery Energy Storage in \$280 to \$580 per kWh for small to medium-sized commercial projects. For large-scale, containerized ESS (e.g., 100 kWh and above), costs can drop to \$180 to \$320 per kWh, Banking on batteries in Chile Storage project announcements are coming thick and fast as co-location with wind turbines offers cost efficiency and a smoother generation profile. Meanwhile, new capacity Energy Storage System Price Trends and Cost-Saving Solutions While the global average ESS price per kWh sits at \$465, regional disparities remain stark. The US market sees \$550-\$650/kWh for residential systems due to import tariffs, whereas ESS Price Forecasting Report (Q2 The ESS Price Forecasting Report provides an in-depth five-year forecast for the price of a DC battery container, including battery cells, modules, racking, and additional
