

## average MW scale storage system price per 200MW in India

How much does a battery storage system cost in India? In another report, the Energy Transitions Commission (ETC) projects that the levelized cost of storage systems in India will reduce from \$0.41 (~INR30.8)/kWh in 2020 to \$0.17 (~INR12.8)/kWh in 2030. The report adopts a two-pronged approach to estimate the cost of Li-ion based MW scale battery storage systems in India. How much does a MWh system cost? MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration. How much does a solar system cost in India? The report further states that the additional per-unit cost for a solar project with a storage system in India will be INR1.44/kWh (\$0.02/kWh) in 2020, INR1.02 (\$0.014)/kWh in 2025, and INR0.83 (\$0.01)/kWh in 2030. How much would energy storage cost in India by 2030? By 2030, the LCOS for standalone BESS system would be Rs 4.1/kWh and that for co-located system would be Rs 3.8/kWh. This implies that adding diurnal flexibility to ~20-25% of the RE generation would cost an additional Rs 0.7-0.8/kWh by 2030. What is the value of energy storage in India? How would it be dispatched? How much storage is required? Are India-specific battery storage cost benchmarks useful? An increasing number of battery storage projects are being built worldwide, and there is significant interest in storage among Indian utilities and policymakers. However, detailed India-specific cost benchmarks that could help utilities design solicitations and assess costs and benefits have been unavailable. How much does a battery cost in India? The report further notes that capital costs for batteries co-located with storage projects in India would fall to \$187 (~INR14,074)/kWh in 2020 and \$92 (~INR6,924)/kWh in 2030. The levelized cost of storage (LCOS) of standalone BESS is estimated to be INR7.12/kWh (~\$0.095/kWh) by 2020, INR5.06/kWh (~\$0.07/kWh) by 2025, and INR4.12/kWh (~\$0.06/kWh) by 2030. Motivation and context U.S. trends in cost of grid-scale battery storage Methodology for cost estimation in India Key Findings on capital costs, LCOS & tariff adder Relevance for India Policy What is the value of energy storage in India? How would it be dispatched? How much storage is required? As of most recent estimates, the cost of a BESS by MW is between \$200,000 and \$450,000, varying by location, system size, and market conditions. This translates to around \$200 - \$450 per kWh, though in some markets, prices have dropped as low as \$150 per kWh. Key Factors Influencing As of most recent estimates, the cost of a BESS by MW is between \$200,000 and \$450,000, varying by location, system size, and market conditions. This translates to around \$200 - \$450 per kWh, though in some markets, prices have dropped as low as \$150 per kWh. Key Factors Influencing By 2030, the LCOS for standalone BESS system would be Rs 4.1/kWh and that for co-located system would be Rs 3.8/kWh. This implies that adding diurnal flexibility to ~20-25% of the RE generation would cost an additional Rs 0.7-0.8/kWh by 2030. What is the value of energy storage in India? How would it be dispatched? In another report, the Energy Transitions Commission (ETC) projects that the levelized cost of storage systems in India will reduce from \$0.41 (~INR30.8)/kWh in 2020 to \$0.17 (~INR12.8)/kWh in 2030. The report adopts a two-pronged approach to estimate the cost of Li-ion based MW scale battery storage maintaining its

## average MW scale storage system price per 200MW in India

position as the cheapest form - in terms of \$/kWh - of grid-scale energy storage. Of all countries here compared, costs are cheapest in India, which already hosts a large installed capacity of MW (the 7th largest in the world) with more projects in the pipeline (CEA). It Recent energy storage auctions in India reveal record-low prices, with unsubsidized standalone battery storage bids at 2.8 lacs/MW/month and solar+storage bids at 3.1-3.5 INR/kWh Our analysis, based on implied solar and storage costs from these bids and bottom-up global cost estimates, shows that a As of most recent estimates, the cost of a BESS by MW is between \$200,000 and \$450,000, varying by location, system size, and market conditions. This translates to around \$200 - \$450 per kWh, though in some markets, prices have dropped as low as \$150 per kWh. Key Factors Influencing BESS Prices Currently, the cost of battery-based energy storage in India is INR 10.18/kWh, as discovered in a SECI auction for 500 MW/ MWh BESS. The government has launched viability gap funding and Production-Linked Incentive (PLI) schemes to make battery storage affordable. RK Singh, India's minister for Levelized Cost of Storage for Standalone BESS Could The report further states that the additional per-unit cost for a solar project with a storage system in India will be INR1.44/kWh (\$0.02/kWh) in , INR1.02 (\$0.014)/kWh in , and INR0.83 (\$0.01)/kWh in .

Figure 1. Recent & projected costs of key grid-scale storage technologies in India, China, & the US maintaining its position as the cheapest form - in terms of \$/kWh - of grid

Plummeting Solar+Storage Auction Prices in India Our analysis, based on implied solar and storage costs from these bids and bottom-up global cost estimates, shows that a solar-plus-storage system can deliver 24/7 clean power at over 95% availability for less than 6 INR/kWh. What is the Cost of BESS per MW? Trends and ForecastAs of most recent estimates, the cost of a BESS by MW is between \$200,000 and \$450,000, varying by location, system size, and market conditions. Cost of battery-based energy storage, INR 10.18/kWh

Currently, the cost of battery-based energy storage in India is INR 10.18/kWh, as discovered in a SECI auction for 500 MW/ MWh BESS. The government has launched viability gap funding and Production-Linked

Grid-Scale Battery Storage: Costs, Value, and Regulatory Bottom-up: For battery pack prices, we use global forecasts; For Balance of System (BoS) costs, we scale US benchmark estimates to India using comparison with component level solar PV

REPORT ON ENERGY STORAGE SYSTEMS

Standalone BESS tenders are the primary mechanism for enhancing the capacity credit of existing VRE systems integrated with the grid. Following an initial period of aggressive bidding
