The nickel manganese cobalt battery market size exceeded USD 30.5 billion in and is estimated to exhibit 14.8% CAGR between and driven by growth in renewable energy sector. The global nickel manganese cobalt battery market was estimated at USD 30.5 billion in . The market is expected to grow from USD 35.6 billion in to USD 123.4 billion in , at a CAGR of 14.8%. Nickel manganese cobalt batteries are generally used as a rechargeable battery in portable Lithium-ion (Li-ion) EV battery prices have decreased dramatically over the past few years, mainly due to the fall in prices of critical battery metals: Lithium, cobalt and nickel. For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in to about \$30,000 in . The global nickel cobalt manganese (NCM) industry is projected to reach USD 2.7 billion in . The industry will rise tremendously, led by the growing demand for lithium-ion batteries in electric vehicles and energy storage systems. With a compound annual growth rate (CAGR) of 15.7%, the industry Cobalt prices have steadily declined throughout , reaching levels not seen since . This marks a 74% drop from the peak of \$81,969.70 per metric tonne. The primary driver of this downturn is reduced demand from the battery sector. As the industry transitions from nickel-manganese-cobalt The market, estimated at \$25 billion in , is projected to exhibit a Compound Annual Growth Rate (CAGR) of 15% from to , reaching an estimated \$80 billion by . This significant expansion is fueled by several key factors. Firstly, the widespread adoption of EVs globally is Lithium cobalt oxide (LCO), lithium iron phosphate (LFP), and nickel manganese cobalt oxide (NMC) are
