

average commercial energy storage price per 50MW in Spain

What is Spain's battery storage market? Spain's battery storage market is dominated by customer-sited systems. Utility-scale storage remains nascent. Currently, Spain's storage market is mainly composed of small-scale batteries co-located with solar PV. Spain's household electricity prices now stand at over EUR 0.30/kWh on average. Why are battery storage options more suitable in Spain? As a result, shorter duration storage options like batteries are more suitable in Spain. In Spain, over 50% of excess renewable energy occurs in periods where there is continuous excess for less than 12 hours i.e. a battery that chooses to charge on this energy would be able to discharge within 12 hours. Is the capacity market a good investment in Spain? The capacity market in Spain represents an opportunity for the storage sector but cannot be considered the sole basis for investment. Its design must be complemented by a diversification strategy in other electricity markets to ensure the profitability and sustainability of projects. Is combining solar and storage a good idea in Spain? This variability, combined with Spain's excellent solar resources, make the economics of combining solar with storage increasingly favorable. The market for utility-scale batteries has been almost non-existent until recently as the market has lacked a clear policy and regulatory framework. Will Spain achieve 20GW of storage by 2030? In addition, Spain has developed a national storage roadmap that includes a target to achieve 20GW of storage by 2030. However, current levels of customer-sited storage adoption already exceed its targets.³⁷ To date, neither has been sufficiently attractive to mobilize investments at scale. How is the capacity market developing in Spain? The development of the capacity market in Spain has progressed in recent months with the publication of a public consultation in December 2022. The process is currently following these steps: Public consultation: Recently concluded after a six-week period, during which feedback was received from various industry stakeholders. The market for utility-scale storage projects remains comparatively small at around 100MW, though a pipeline of projects is beginning to emerge.^{2,3,4,5} Much of Spain's existing utility-scale storage capacity is in concentrating solar power plants (thermal storage) and pumped hydro.^{6,7} The market for utility-scale storage projects remains comparatively small at around 100MW, though a pipeline of projects is beginning to emerge.^{2,3,4,5} Much of Spain's existing utility-scale storage capacity is in concentrating solar power plants (thermal storage) and pumped hydro.^{6,7} Spain's household electricity prices now stand at over EUR 0.30/kWh on average. In addition, Spain's reliance on fossil gas has increased price volatility in recent years.^{16,17,18,19} This variability, combined with Spain's excellent solar resources, make the economics of combining solar with storage increasingly favorable. A modelled 50MW, 2-hour battery, with a roundtrip efficiency of 87% and trading in the Iberian market could have captured an average margin of EUR7.04/kWh/month between September to December with a maximum of EUR12.87/kWh/month achieved in September 2022. Prior to the lower price volatility, on average, the cost of lithium-ion batteries for large-scale storage applications can range from \$100 to \$300 per kilowatt-hour (kWh) of capacity. For a 50MW/50MWh system (assuming a 1-hour discharge duration), the battery cost alone could be between \$5 million and \$15 million. - Power Conversion
