Does Singapore have a resilient energy grid? The Singapore government has implemented a good number of initiatives to ensure the resilience of the energy grid, including the use of energy storage systems ("ESS"). Does Singapore have a reliable electricity grid? Although Singapore has one of the most reliable electricity grids in the world, However, as Singapore looks to renewable energy and power imports to transition to a low-carbon energy system, and moves towards the electrification of its transport system, it is increasingly vital to ensure that its grid infrastructure remains stable and resilient. What is grid-scale energy storage (ESS)? Grid-scale ESS comprise of batteries and technologies connected to the power grid that can store energy and then supply it back to the grid as needed - for example, at night, when no solar power is available, or at times when electricity generation is disrupted. Does Singapore need a wider deployment of ESS? However, Singapore critically needs the technology and the innovative urban deployment topologies that can enable a wider deployment of ESS to match the rise of renewable energy to meet the ever-increasing energy demand. In Q4 , the EMA had put out a grant call to invite proposals for facilitating the wider deployment of ESS in Singapore. What is ESS access & how does it work in Singapore? Led by EMA, the ACCESS programme helps to facilitate ESS adoption in Singapore by promoting use cases and business models. It also looks at securing space, marrying demand with solution, and facilitating regulatory approvals for ESS deployment.
