How many home storage units are there in Germany? In 2023, more than 100,000 home storage units were implemented across Germany, bringing the total number to 300,000. In 2022, photovoltaic (PV) and energy-storage for households reached grid-parity: storing PV energy with batteries became cheaper than the price from the public power network. How big is the energy storage industry in Germany? With a turnover of over 15.7 billion euros, and a 46 percent growth increase in comparison to 2021, the energy storage sector's expansion in Germany continues at a fast pace, according to industry data released by the German Association of Energy Storage Systems (BVES). Why do we need energy storage systems in Germany? Increasing the share of renewables poses new challenges: Excess energy produced during off-peak hours needs to be stored and made available when needed. Since energy storage systems (ESS) can balance supply and demand, they are an essential part of Germany's energy transition. In line with this, the market for ESS is constantly growing. Is Germany a good place to invest in energy storage? While the demand for energy storage is growing across Europe, Germany remains the European lead target market and the first choice for companies seeking to enter this fast-developing industry. The country stands out as a unique market, development platform and export hub. How much does Germany spend on EV and stationary battery research? Public research and development incentives for EV and stationary battery research amount to between EUR 80 million and EUR 85 million every year. As the European lead market in the energy transition age, Germany provides the opportunity for companies to develop, test, define and market new energy storage solutions. Why do German households still have high electricity bills? Despite the growth of cheaper renewables, German households still face high electricity bills. Why? Because the final price isn't just about how electricity is generated. It's also about network charges, taxes, and various levies. In 2023, a typical household's electricity price breaks down like this: The rapid growth of energy storage in Germany
