Why are energy prices important in Switzerland? Swiss Federal Office of Energy dashboard : Energy prices on the markets are an important indicator of the current market and supply situation in Europe and Switzerland. Supply (production) is combined here with demand (consumption) and ultimately results in a price for a specific energy product. There are markets for different products. How much energy does Switzerland use? Despite a notable population increase of 28.7% between and , energy consumption decreased by 5.9% during this period. The majority of energy consumed in Switzerland is derived from petroleum and motor fuels, accounting for 43% of the total, followed by electricity at 26%, and gas at 15%. What data is used for electricity and gas prices? These include electricity (power), gas, heating oil, diesel and petrol. Different data are used for this purpose. For electricity and gas, data from the stock exchanges are used. In contrast to electricity prices, the data on gas prices are referenced to a base year, as licensing issues still need to be clarified.
