Will energy storage systems grow in Brazil? According to CELA's findings, the market for energy storage systems in Brazil is poised for a remarkable expansion, with an estimated annual growth rate of 12.8% until . The study anticipates a substantial increase in installed capacity, reaching up to 7.2 GW during this period. Are solar and wind hybrid systems viable in Brazil? The model concludes that the solar and wind hybrid system for hydrogen production and storage is not yet viable in Brazil. In addition, the CAPEX of electrolyzers and storage tanks and their operating losses are key points for the deployment of these systems. Why should you invest in energy storage in Brazil? Opportunities for Stakeholders: Investment Opportunities: The projected growth in the energy storage market presents lucrative investment opportunities for both domestic and international investors looking to capitalize on the evolving energy landscape in Brazil. Are renewable hybrid systems economically viable in Brazil? Renewable hybrid systems with hydrogen are current economic unviable in Brazil. Green hydrogen produced from curtailment events are current economic not feasible. To produce hydrogen economically viable, the plants should operate above h. The CAPEX should cost less than USD 650/kWe to store hydrogen economically viable. How much does it cost to store hydrogen in Brazil? The CAPEX should cost less than USD 650/kWe to store hydrogen economically viable. It is more profitable trading hydrogen than transforming it back into power. The work aims to verify the economic feasibility of renewable hybrid systems for hydrogen production and storage in the Brazilian electric power sector. Are hybrid solar systems feasible?
