

## average microgrid storage price per 15MW in Philippines

How many microgrids are there in the Philippines?The Philippines Department of Energy (DOE) has awarded contracts for eight microgrids in unserved areas, including hybrid systems with solar and energy storage, as well as diesel gensets. Plans are now underway for a second competitive bidding round to develop microgrids in other areas without electricity access. How much does energy storage cost a microgrid?In commercial/industrial and utility microgrids, soft costs (43% and 24%, respectively) represent significant portion of the total costs per megawatt. Finally, energy storage contributes significantly to the total cost of commercial and community microgrids, which have percentages of 25% and 15%, respectively, of the total costs per megawatt. Are microgrids a good idea in the Philippines?Microgrids are relatively new to the Philippines. Gaining of technical expertise and experience has just started. Economies of scale, particularly for battery storage, must be achieved in order to bring down the overall cost. Benchmarking with other Microgrid developers from other countries will help increase know-how. How much does a microgrid cost per megawatt?The analysis of total microgrid costs per megawatt shows that the community microgrid market has the lowest mean, at \$2.1 million/MW of DERs installed; followed by the utility and campus markets, which have mean costs of \$2.6 million/MW and \$3.3 million/MW, respectively. Finally, the commercial market has the highest average cost, at \$4 million/MW. When will a microgrid system start operating?The systems are expected to start operations no later than 18 months after the execution of microgrid system service contracts. Electricity rates will be subject to approval from the Energy Regulatory Commission (ERC), said the DOE. Are off grid electrification systems sustainable in the Philippines?In the Philippines, most of the existing off grid electrification which are not under SPUG and QTP schemes, are not sustainable. Generation systems, such as diesel generators or small solar home systems, usually fail after a few years of operation due to poor product quality or lack of maintenance. The Energy Regulatory Commission (ERC) has released draft reserve prices for the fourth round of the Green Energy Auction Program (GEAP), marking the first time that solar-plus-storage projects will be included. The Energy Regulatory Commission (ERC) has released draft reserve prices for the fourth round of the Green Energy Auction Program (GEAP), marking the first time that solar-plus-storage projects will be included. The Energy Regulatory Commission (ERC) has released draft reserve prices for the fourth round of the Green Energy Auction Program (GEAP), marking the first time that solar-plus-storage projects will be included. The ERC pegged the preliminary Green Energy Auction Reserve (GEAR) prices at PHP 4. renewable energy systems (HRES) for the Polillo Islands, consisting of solar PV, energy storage, and diesel generators. Clustered microgrids showed lower costs compared to decentralized systems, while These microgrids integrate various distributed energy resources (DERs) such as solar photovoltaic (PV) panels, wind turbines, energy storage batteries, and conventional generators to provide localized, efficient, and reliable power solutions. They are increasingly seen as critical infrastructure Luzon's \$0.2/kWh peak-valley price spread and 2.4GWp PV pipeline make this the ideal site to deploy 3.4GWh of storage for peak shaving and arbitrage. Luzon Island faces a significant gap between peak demand and baseload supply, with renewable generation unable to cover peak loads.
