Breakdown of electricity sales by volume. Per cent MANUFACTURING EXCL. ENERGY-INTENSIVE MANUFACTURING 1 Average for all types of contracts, incl. new fixed-price contracts and variable price (not tied to spot price). Pulp and paper industry is included in energy-intensive manufacturing. For example, the average household price (including grid and taxes, excluding one-time support) was about 134.9 ¢/kWh. This breaks down as roughly 59.9 ¢/kWh actual electricity energy cost, 36.0 ¢/kWh for grid rent (transmission + distribution), and 39.0 ¢/kWh in taxes. Recent industry analysis reveals that lithium-ion battery storage systems now average EUR300-400 per kilowatt-hour installed, with projections indicating a further 40% cost reduction by 2025. For utility operators and project developers, these economics reshape the fundamental calculations of grid for the Norwegian microgrid projects. microgrid deployment in Norway. This overview is achieved through a combination of six different case studies and a literature study. Four Norwegian cases, an American and a Swedish case. Electricity prices After hitting record highs in 2022, electricity prices eased in 2023, though regional differences remain--Southern Norway typically pays more. For businesses, especially energy-intensive ones, electricity prices are a significant concern. The quarterly electricity price statistics include information about average electricity prices for households, services and manufacturing in addition to the wholesale market. They also provide information about different types of microgrids.

Green Hydrogen Microgrids: A Techno-Economic Microgrids powered by green hydrogen are emerging as a potential solution for clean, resilient energy in small-scale applications like data centers, mega charging stations and isolated communities. These systems are still in the early stages of development.
