

average nickel manganese cobalt battery price per 10kWh in Vietnam

How much does cobalt cost in ? For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in to about \$30,000 in . Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in . Why did NCM battery cell prices drop in May? Asian nickel cobalt manganese (NCM) battery cell prices fell to their lowest level for the first time in over three years in May, retreating significantly from the peak seen in . A combination of lower critical battery raw material prices, supply glut, a sluggish demand and improving technology has kept a tight lid on NCM [] Are lithium and cobalt prices market-reflective? This includes benchmark prices for lithium and cobalt, two battery materials that continue to experience market volatility and supply/demand imbalances. Our widely used prices are market-reflective, assessing both the buy- and sell-side of transactions. Are NCM batteries a good choice for EVs? This cost advantage makes them a favorable choice for standard- or short-range EVs. In the rapidly evolving EV battery market, specific compositions have taken center stage. In , NCM batteries commanded 58% of the market share, closely followed by LFP and NCA, each holding a 21% share. Why is NCM a tight lid on battery production? A combination of lower critical battery raw material prices, supply glut, a sluggish demand and improving technology has kept a tight lid on NCM [] Already a subscriber? How did NEV sales in China perform in September? NEV sales in China continued to show growth in September, with the market hitting 1.3m sales. Business activity was quiet in China in late September leading up to national holidays in the first week of October. In September, anode production in China edged slightly higher by around 2% month on month, according to local sources. Details behind the price forecasts for lithium, nickel, cobalt, manganese, and graphite can be found in the Fastmarkets Long Term Forecasts (LTFs). We expect all other material prices, such as separators, electrolyte, current collectors to reduce in price as demand increases and production scales. Cobalt sulphate prices duly responded, jumping more than 60% in March to average \$5,767 a tonne, and holding onto most of those gains in April. Cobalt byproduct output is also increasing in Indonesia as its nickel shipments ballooned and the DRC is now in talks with the Asian nation to collaborate. Figure 1 presents the estimated cost for nickel manganese cobalt (NCM) 811 cells for a 10 gigawatt-hour per year production rate across four different countries. Figure 1 In the first quarter of , NCM 811 cell costs in China were estimated to be 101 dollars per kilowatt hour (kWh) and 110. The per kWh price of NCM811 cell is currently the lowest in Greater China due to the low cost of battery materials, thanks to high localization, and the price difference in the manufacturing cost of these cells compared to Europe and North America. However, S& P Global Mobility forecasts a more than 10% increase. For instance, the article highlights that lithium nickel cobalt aluminum oxide (NCA) batteries have an average price of \$120.3 per kilowatt-hour (kWh), while lithium nickel cobalt manganese oxide (NCM) comes in slightly cheaper at \$112.7 per kWh.
