

## average nickel manganese cobalt battery price per 1GW in Canada

How much does a lithium nickel cobalt battery cost? Lithium nickel cobalt aluminum oxide (NCA) battery cells have an average price of \$120.3 per kilowatt-hour (kWh), while lithium nickel cobalt manganese oxide (NCM) has a slightly lower price point at \$112.7 per kWh. Both contain significant nickel proportions, increasing the battery's energy density and allowing for longer range. How much does cobalt cost in ? For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in to about \$30,000 in . Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in . What is the difference between nickel and cobalt in a cathode? Cathodes contain nickel which delivers high energy density, allowing the vehicle to travel further. Cobalt ensures cathodes do not easily overheat or catch fire and it helps extend the life of batteries which automakers usually guarantee for eight to 10 years. HOW HAS CATHODE CHEMISTRY CHANGED? Lithium nickel cobalt aluminum oxide (NCA) battery cells have an average price of \$120.3 per kilowatt-hour (kWh), while lithium nickel cobalt manganese oxide (NCM) has a slightly lower price point at \$112.7 per kWh.
