How much does nmc111 battery cost? NMC111 with equal shares of nickel, manganese and cobalt assumed here. Battery pack price of 130 USD/kWh assumed. Values in brackets show baseline raw material cost assumptions based on monthly average prices from -. Can lithiated nickel manganese cobalt oxide be produced by co-precipitation? A process model has been developed and used to study the production process of a common lithium-ion cathode material, lithiated nickel manganese cobalt oxide, using the co-precipitation method. The process was simulated for a plant producing kg day<sup>-1</sup>. How is lithium nickel manganese cobalt oxide powder produced? Schematic of a process for the production of lithium nickel manganese cobalt oxide powder. The product stream, a slurry of solid precipitates in a solution, is phase separated, and then filtered and washed several times. The filtration may be done in a rotary vacuum filter followed by drying in a spray dryer. Are lithium and cobalt prices market-reflective? This includes benchmark prices for lithium and cobalt, two battery materials that continue to experience market volatility and supply/demand imbalances. Our widely used prices are market-reflective, assessing both the buy- and sell-side of transactions. How will cathode technology change the price of cobalt metal? As the cathode material technology matures, manufacturers will require less frequent design changes leading to longer plant life and lower depreciation costs. The price of cobalt metal has changed in the last six years from a peak of \$27 per kg to a low of \$22 per kg . Does raw material cost affect lithium-ion battery pack prices? The analysis shows that each material only contributes a minor share to total raw material cost. In addition, total raw materials cost only constitute a share of total product price. The cost increase of one raw material will therefore only have a limited impact on lithium-ion battery pack prices. Details behind the price forecasts for lithium, nickel, cobalt, manganese, and graphite can be found in the Fastmarkets Long Term Forecasts (LTFs). We expect all other material prices, such as separators, electrolyte, current collectors to reduce in price as demand increases and production scales
