

average renewable energy storage price per 500MW in Spain

Platts has launched an "interactive explorer" tool that shows the capture price received by wind and solar power assets, using hourly production and monthly average price data for Spain, Germany, Italy, France, and the United Kingdom. Image: Maxim Grama y Andreas Franke, S& P Global Commodity

Spain has launched an ambitious EUR700 million (around \$796 million) program to increase its energy storage capacity. This plan will add 2.5 to 3.5 gigawatts (GW) of storage. It includes pumped hydro, thermal energy storage, and battery systems. The goal is to improve how Spain uses renewable energy

Thanks to publicly available data from the national grid and market operators, respectively Red Eléctrica de España (REE) and OMIE, we were able to calculate the average captured price for both technologies in each AC over the period, based on hourly day-ahead wholesale market prices**. The Spanish scheme for energy storage hybrid projects that produce electricity from renewable sources. The programme fits within the organisation's Recovery, Transformation, and Resilience Plan (RRTP). A total installed capacity of at least 600 MW, or the equal amount of total energy supply, will be

Maximum eligible costs per storage unit range from EUR 250/kWh for stand-alone storage to EUR 1,500/kWh for new pumped-storage hydropower projects. Aid will be distributed by region, with higher allocations to less developed or transitioning areas in line with EU cohesion policies.

Beneficiaries

New interactive map of renewable energy capture

The tool displays the capture price received by wind and solar power assets using hourly production and monthly average price data for Spain, Germany, Italy, France, and the United Kingdom.

SPAIN

The market for utility-scale storage projects remains comparatively small at around 100MW, though a pipeline of projects is beginning to emerge.^{2,3,4,5} Much of Spain's existing utility

Spain's EUR700 Million Plan to Boost Energy Storage

Spain has launched an ambitious EUR700 million (around \$796 million) program to increase its energy storage capacity. This plan will add 2.5 to 3.5 gigawatts (GW) of storage. It includes pumped hydro, thermal energy

Renewable energy in Spain

The use of renewable energy is expected to grow rapidly in the next few years. With the aim of achieving climate neutrality by 2050, the Spanish energy sector is undergoing a

Renewable price capture in Spain: mapping the territory

Although the money will solely pay for the addition of storage, the projects must be hybridised with renewable energy sources. Only initiatives that wouldn't be financially viable without state assistance will receive

Spain offers EUR 700m in aid for large-scale energy

Maximum eligible costs per storage unit range from EUR 250/kWh for stand-alone storage to EUR 1,500/kWh for new pumped-storage hydropower projects. Aid will be distributed by region, with higher allocations to
