Are sodium ion batteries a good investment? Analysing 30 LDES technologies, the research found sodium-ion batteries to hold the most promise due to their fast improvement rate - around 57% in . They offer more efficiency in round-trip energy use, greater operational flexibility and lose less energy during storage and supply. How much will sodium ion batteries cost in ? Assuming a similar capex cost to Li-ion-based battery energy storage systems (BESS) at \$300/kWh, sodium-ion batteries' 57% improvement rate will see them increasingly more affordable than Li-ion cells, reaching around \$10/kWh by . Why is Finland a good choice for next generation batteries? ed for next generation batteries. Finland is strong in applications related to harsh environments, e.g. marine and heavy-duty that are traditional y strong Finnish industry segments. Solutions for energy storage Will sodium-ion batteries dominate the future of long-duration energy storage? With costs fast declining, sodium-ion batteries look set to dominate the future of long-duration energy storage, finds AI-based analysis that predicts technological breakthroughs based on global patent data. Sodium-ion batteries' rapid development could see long-duration energy storage (LDES) enter mainstream use as early as . Should Finland ensure the existence of a lithium-ion battery ecosystem? in the European battery ecosystem. It is clear that Finland should assure the existence of these competences in the future. The role of GTK and its vast geoscientific data plays an important role in this, and not only regarding the current Li-ion battery boom but also in the future when different minerals are req Is the Li-ion battery chemistry know-how growing in Finland? and University of Eastern Finland. When compared global y, the scale of research is modest. However, the Li-ion battery chemistry know-how has grown rapidly in the recent past years in Finland, most likely due to the evolving "hype" around the Li-ion battery industry and the Li-ion With costs fast declining, sodium-ion batteries look set to dominate the future of long-duration energy storage, finds AI-based analysis that predicts technological breakthroughs based on global patent data. With costs fast declining, sodium-ion batteries look set to dominate the future of long-duration energy storage, finds AI-based analysis that predicts technological breakthroughs based on global patent data. The average cost for sodium-ion cells in is \$87 per kilowatt-hour (kWh), marginally cheaper than lithium-ion cells at \$89/kWh. Assuming a similar capex cost to Li-ion-based battery energy storage systems (BESS) at \$300/kWh, sodium-ion batteries' 57% improvement rate will see them increasingly Terraframe specializes in producing battery chemicals, including nickel and cobalt sulphates, which are essential for electric vehicles.
