

## average solar diesel hybrid storage price per 50kWh in Indonesia

How much LCOE does a hybrid PV system cost? On average the LCOE for hybrid PV is 0.38 USD/kWh, for the stand-alone PV system this is 0.76 USD/kWh. Both configurations are able to supply electricity cost-effectively in large parts of Indonesia. How much does a solar system cost in Indonesia? The average pricing of a solar system in Indonesia is IDR 15 - 21 million per kWp installed and even less if for larger installations. For the batteries, you can expect to pay an additional IDR 10 - 12 million per kWh for LifePO4 lithium batteries, which give you the biggest bang for your buck. Are off-grid PV systems cheaper than diesel gensets? We distinguished between stand-alone and hybrid PV systems. Results show that the costs of off-grid hybrid PV systems with an average LCOE of 0.38 USD/kWh are 19% cheaper compared with electricity generation by diesel gensets in most rural parts of Indonesia. Are solar gensets affecting economic growth in Indonesia? In addition, the available gensets were run only 4 hours in the evening daily with frequent breakdowns, thus hindering economic productivity and growth. In , Millennium Challenge Account Indonesia (MCAI) and Akuo Energy jointly selected three villages in East Kalimantan to install hybrid minigrids that are powered by solar energy. Is a stand-alone PV system cheaper than a diesel genset? Stand-alone PV systems show an average LCOE of 0.76 USD/kWh which is 3% cheaper than stand-alone diesel gensets on average. The potential of off-grid PV systems is 969 GWh/year, of which 566 GWh/year generated by hybrid PV systems and 403 GWh/year by stand-alone PV systems.

### 1. Introduction

How fast can you charge solar batteries in Indonesia? As previously mentioned, in Indonesia you get an average of 4.2 kWh per kW of solar installed. With that in mind, you would want to be able to charge your batteries in 3 hours (or even faster in cloudier areas) so that you can still have some surplus for day use on sunny days, and can charge the batteries fast enough during cloudier days. The study proved that the impact of PV penetration and battery storage on power production, expense of power, number of operational hours of diesel generators for a given hybrid configuration. A 5MW battery energy storage system (BESS) pilot project has been launched by Indonesia's state-owned utility and battery manufacturer in an effort to transition away from diesel-generated electricity. The nation's state-owned utility, PLN, has joined forces with another state-owned organisation. Fuel expenses for diesel generators formed almost 30% of the monthly income of the villagers. In addition, the available gensets were run only 4 hours in the evening daily with frequent breakdowns, thus hindering economic productivity and growth. In , Millennium Challenge Account Indonesia International solar developer ib vogt is pleased to announce the award of a cluster of 48 projects under the Diesel Replacement Program of Pt PLN (Persero) ("PLN") in Indonesia. ib vogt will deliver a combination of solar and battery energy storage systems ("BESS") to various locations across the The On-grid design will produce electrical energy of 4,57 kWh/kWp/day with an initial investment value of USD 1,733.70 while the Hybrid design will produce 4,04 kWh/Kwp/day with an initial investment value of USD 1,871.63 for a 24 years project period and with approximately four times batteries
