

average utility scale ESS price per 30kWh in Poland

How much does electricity cost in Poland? On the base of Rachuneo's report from March, we can see that average electricity consumption for average Polish household oscillates around 200 kWh. Taking into consideration average gross price, monthly bill for electricity will be 146 z? gross. Monthly cost of electricity for average Polish household

What are the electricity tariffs? How much electricity does a Polish household use? Dishwasher, washing machine, game console, desktop, fridge which works 24/7 and many more. On the base of Rachuneo's report from March, we can see that average electricity consumption for average Polish household oscillates around 200 kWh. Taking into consideration average gross price, monthly bill for electricity will be 146 z? gross.

How many MW rated energy storage systems are there in Poland? The capacity obligations for these projects ranged from 1.2 MW to 153 MW rated power, with an average capacity of around 30 MW. The decision to reduce the de-rating factor for energy storage systems in the last capacity market auction in Poland from 95 percent to 61 percent did not prove detrimental to the market.

What is the most popular energy tariff in Poland? G11 - the most popular energy tariff in Poland. If you did not pay attention to what tariff you are using, then your bill probably has the G11 sign. This means that you pay the same electricity rate 24/7. G12 - it is a two-zone tariff, depending on the time of day. The lower and higher rate for energy consumption applies.

Is Poland moving towards battery energy storage systems (BESS)? As expected, Poland's latest capacity market auctions have highlighted a significant shift towards the battery energy storage systems (BESS) beside the fact that the de-rating factor has been significantly decreased.

How do I compare the price of electricity? If you want to compare the price of electricity, you would need to define what is your current usage of electricity per month. We measure this with amount of kWh. For example, if your TV has power consumption around 60 Watt, then 1x full hour of working will consume 0.06 kWh.
