How does economic growth affect energy demand in Ghana?

1.1 Introduction

The dynamics of Ghana's energy sector are shaped by a complex interplay of factors such as weather conditions, economic growth, inflation, and energy efficiency initiatives. Economic growth, in particular, plays a pivotal role in driving energy demand, especially within the commercial and industrial sectors. Ghana's electricity consumption in 2023 was 24,688 GWh. In 2024, projected electricity consumption is 25,836 GWh, representing a 4.7% increase. Hydro, thermal, and renewables constitute Ghana's electricity generation mix. Installed generation capacity, excluding embedded capacity as of November 2023, was 5,260 MW, with a total dependable capacity of 3,618 MW. How much natural gas is consumed in Ghana in 2023? A total of 13,788 MMscf of natural gas is projected to be consumed by industries in Ghana. Natural gas consumption is expected to peak at about 39 MMscfd in the last quarter of 2023 as new ceramics industries such as Tetracore, Continental Blue Investments Ghana, and CIMPOR Ghana Ltd are expected to begin production. How much power will be produced in 2023? Dependable capacity. Hydropower and thermal plants are projected to generate 8,561 GWh (33.1%) and 16,997 GWh (65.8%) of total electricity supply in 2023. The remaining supply of 196 GWh, representing 0.8%, is expected to be met by other renewables, including solar PV and biogas operating at the sub-transmission level. Power import in 2023. How much natural gas will Genser use in 2023? Demand Supply Balance Incorporating Genser's projected natural gas consumption into the anticipated natural gas demand by power plants in 2023, an annual average of 369 MMscfd of natural gas is expected to be allocated for power generation, with an additional 38 MMscfd designated for industrial use. Figure 30 illustrates the natural gas demand-supply balance in 2023. What fuel is used in thermal power plants in Ghana? Fossil Fuel Risk Currently, all thermal power plants in Ghana (except some units of the AKSA plant) run on natural gas as their primary fuel. About 80.0% of the thermal plants are dual-fueled, with their secondary fuel being liquid petroleum gas. The primary battery market in Ghana encompasses disposable batteries such as alkaline, zinc-carbon, and lithium batteries, serving consumer electronics, remote devices, and emergency backup power applications. The primary battery market in Ghana encompasses disposable batteries such as alkaline, zinc-carbon, and lithium batteries, serving consumer electronics, remote devices, and emergency backup power applications. The Ghana Primary Battery Market is poised for steady growth rate improvements from 2023 to 2025. The growth rate starts at 6.47% in 2023 and reaches 10.81% by 2025. Ghana's Primary Battery market is anticipated to experience a growing growth rate of 8.48% by 2025, reflecting trends observed in the demand of 3,618 MW. In 2023, the system peak load is estimated to be 4,125 MW, reflecting a 4.4% increase from 2022. Factors to influence the peak demand include economic growth and increased loads across ECG and NEDCo distribution zones. In November 2023, total electricity consumption was 24,688 GWh. The Budget, presented by Dr. Cassiel Ato Forson, MP, Minister for Finance, outlined significant concerns and proposed reforms in Ghana's energy sector. The budget emphasized the need to address the sector's financial shortfalls, inefficiencies, and mounting debt while implementing strategies to improve efficiency and attract investment. Finance Minister, Dr. Cassiel Ato Forson, has unveiled key measures in the Budget to address challenges in Ghana's energy sector. The interventions aim to

reduce financial shortfalls, enhance efficiency, and ensure a stable power supply to support economic growth. Presenting the Budget A battery backup system typically operates in the following manner: Charging Phase: When the main power supply is available, the batteries are charged via the charge controller. Energy Storage: The charged batteries store energy until needed. Discharge Phase: During a power outage, the inverter revenue, job creation, and overall economic growth. This ACEP Budget Insights highlights the key proposals from the Budget Statement delivered in Parliament and examines their potential implications for the energy and extractive sectors.
