

## gel battery storage cost vs benefit calculation in Italy

Why are battery energy storage systems not being developed in Italy? The development of Battery Energy Storage Systems (hereinafter "BESS") in Italy has been limited by the fact that the spread of renewable sources is not such as to produce significant price differences during the hours of the day yet. An unfavourable legal and regulatory framework has also contributed to the low diffusion of BESS. How many GW of battery storage will Italy have by 2030? The remaining 3-4 GW is expected to come from utility-scale systems. By 2030, Italy aims to achieve 30-40 GW of storage capacity. There are significant regional differences in the adoption of battery storage systems across the country. How much does battery storage cost in Europe? The landscape of utility-scale battery storage costs in Europe continues to evolve rapidly, driven by technological advancements and increasing demand for renewable energy integration. As we've explored, the current costs range from EUR250 to EUR400 per kWh, with a clear downward trajectory expected in the coming years. How much does battery storage cost? The largest component of utility-scale battery storage costs lies in the battery cells themselves, typically accounting for 30-40% of total system costs. In the European market, lithium-ion batteries currently range from EUR200 to EUR300 per kilowatt-hour (kWh), with prices continuing to decrease as manufacturing scales up and technology improves. How much does a lithium-ion battery storage system cost? Recent industry analysis reveals that lithium-ion battery storage systems now average EUR300-400 per kilowatt-hour installed, with projections indicating a further 40% cost reduction by 2030. For utility operators and project developers, these economics reshape the fundamental calculations of grid stabilization and peak demand management. Why is Customer-Sited storage so popular in Italy? Customer-sited storage adoption has been mainly driven by a combination of high electricity prices and generous tax incentives. For utility-scale systems, Italy has established favourable electricity market rules that enable projects to earn revenues from a range of different sources. Unlike traditional flooded lead-acid batteries, gel cell batteries utilize a thick gel electrolyte instead of liquid acid, offering several benefits. However, these advantages come at a cost, making it crucial to conduct a thorough cost vs. benefit analysis before selecting gel cell batteries. Upfront Cost Sealed gel cell batteries typically have a higher upfront cost compared to flooded lead-acid batteries. This is primarily due to the advanced Figure ES-2 shows the overall capital cost for a 4-hour battery system based on those projections, with storage costs of \$245/kWh, \$326/kWh, and Battery storage costs have changed rapidly over the past decade. In 2020, the National Renewable Energy Laboratory (NREL) published a set of cost This report is part of a series that analyses the battery storage market in select European countries. Italy has both a rapidly growing utility-scale market as well as a flourishing customer-sited battery storage market. Customer-sited storage adoption has been mainly driven by a combination of Recent industry analysis reveals that
