

government procurement price of domestic energy storage in Spain

What does the European Commission say about energy storage in Spain? La Moncloa. 17/03/. European Commission approves new 700 million aid scheme to boost energy storage in Spain [News] The Ministry of Ecological Transition and Demographic Challenge will promote the large-scale deployment of this technology by co-financing investments of up to 85%. How much money will Spain spend on energy storage projects? Spain's ministry for the ecological transition said on Friday it will allocate EUR 700 million (USD 799.4m) in grants through competitive tendering to support large-scale energy storage projects in an effort to improve grid flexibility and integrate more renewables. Vanadium redox flow battery installed at the Son Orlandis solar farm in Mallorca. Why should Spain invest in energy storage? Investing in energy storage helps Spain meet its climate goals. This includes achieving carbon neutrality by . Storing renewable energy instead of wasting it helps the country rely less on fossil fuels. This also cuts down greenhouse gas emissions. Pumped hydro, thermal storage, and battery systems are effective technologies. How long does it take to build energy storage in Spain? Projects will need to be built within 36 months of being granted the aid, with a final commercial operation date no later than 31 December, . Spain is targeting around 22.5GW of energy storage by as part of its National Energy and Climate Plan (NECP). What is the European Commission's new energy storage support scheme? The European Commission approved a new support scheme. It targets large-scale energy storage projects in Spain. It focuses on technologies like standalone battery energy storage systems (BESS), pumped hydro energy storage (PHES), and thermal energy storage. How much money is available for energy storage projects? A total of EUR 700 million (US\$ 800 million) is available in the form of capex grants. It is open to standalone battery energy storage system (BESS) projects, thermal energy storage projects and pumped hydro energy storage (PHES) projects as well as those that are hybridised with renewable generation facilities. Maximum eligible costs per storage unit range from EUR 250/kWh for stand-alone storage to EUR 1,500/kWh for new pumped-storage hydropower projects. Aid will be distributed by region, with higher allocations to less developed or transitioning areas in line with EU cohesion policies. Maximum eligible costs per storage unit range from EUR 250/kWh for stand-alone storage to EUR 1,500/kWh for new pumped-storage hydropower projects. Aid will be distributed by region, with higher allocations to less developed or transitioning areas in line with EU cohesion policies. Spain has launched an ambitious EUR 700 million (around \$796 million) program to increase its energy storage capacity. This plan will add 2.5 to 3.5 gigawatts (GW) of storage. It includes pumped hydro, thermal energy storage, and battery systems. The goal is to improve how Spain uses renewable energy The government of Spain, through the Institution for the diversification and energy savings (IDAE) has awarded 880MW/1,809MWh in its first tender for energy storage to be co-located with renewables. Among the companies awarded from the Spanish strategic projects for the economic recovery and Renewable generation is hindered by declining prices, lack of access capacity tenders, and project financing challenges, but opportunities lie in PPAs, asset hybridisation with storage, and the approval of the Spanish capacity market. Traditional generation assets are under pressure from
