The Democratic Republic of Congo (DRC) produces 64% of the global cobalt output, largely as a by-product from copper and nickel mining. Despite the decreasing role of cobalt in battery technology, McKinsey forecasts a 7.5% annual rise in cobalt demand until . The volatility in cobalt prices and Nickel demand is climbing sharply due to its role in lithium nickel manganese cobalt oxide (Li-NMC) batteries. Class 1 nickel, a high-purity form critical for batteries, currently sees around 65% of its production directed towards stainless steel. By , competition between battery and steel

The global nickel manganese cobalt battery market was estimated at USD 30.5 billion in . The market is expected to grow from USD 35.6 billion in to USD 123.4 billion in , at a CAGR of 14.8%. Nickel manganese cobalt batteries are generally used as a rechargeable battery in portable

Scope 3 Magazine explores the supply chain sustainability of lithium, nickel, cobalt and manganese (Credit: Wikimedia Commons) The rapid rise of electric vehicles (EVs) and renewable energy technologies has placed unprecedented strain on the supply chains of critical raw materials. As the latest Proximity to Indonesian nickel allows Chinese producers to manufacture high-nickel precursors at 15-20% lower cost than European counterparts relying on refined nickel imports. Conversely, cobalt supply uncertainties drive Japanese and Korean battery makers to develop low-cobalt NCMA
