

## rooftop solar battery cost vs benefit calculation in Libya

Are solar PV systems a good investment in Libya? In Libya, the solar photovoltaic (PV) systems are encouraging for the future, due to incident solar radiation is greater than the minimum required rate across the country (Hewedy et al., ). Based on that from a techno-economics point-view, there is a need to develop substantial energy resource solutions. How much does a PV system cost in Libya? The PV system for electricity in the Libyan market is estimated to cost about "5-13,000" Libyan/denars (this price from private business companies); depending on the size/capacity that invested by the private sector. Is solar energy available in Libya? Solar energy by far is the most available in Libya as the average sunlight hours is about hours/year and the average solar radiation is approximately 6 kwh/m<sup>2</sup>/day. This paper aims mainly to discuss the feasibility of solar energy in Libya, a brief overview of solar global jobs and the global cost of PV systems during the last decade. When did solar PV systems start in Libya? In the installation of solar PV systems to some rural areas started in Libya . The installation was achieved by the Centre of Solar Energy studies (CSES) and General Electricity Company of Libya (GECOL) with a total power of around 345 KWp. PV systems supplied villages, isolated houses, police stations and street lighting areas . Does a 50 MW solar PV-Grid work in Libya? A study performed by (Aldali and Ahwide, ) proposed analysis of installing a 50 MW solar photovoltaic power plant PV-grid connected with a tracking system in Libya. Solar PV modules of 200 W are used in that study due to its high conversion efficiency. Are grid-connected photovoltaics a good investment in the Libyan power system? For those interested in the large dynamic of photovoltaics economics, a thorough analysis of grid-connected photovoltaics in the Libyan power system would be very beneficial as most firms will raise their profits and lower their costs (Almaktar et al., ), and described by (Almaktar and Shaaban, ). Abstract: This paper investigates grid-connected photovoltaic (PV) systems on rooftops as a case study, implemented in Tripoli, Libya. A comprehensive survey encompassing plant design and detailed performance analysis is conducted to enhance understanding and optimize the operational behavior of PV Abstract: This paper investigates grid-connected photovoltaic (PV) systems on rooftops as a case study, implemented in Tripoli, Libya. A comprehensive survey encompassing plant design and detailed performance analysis is conducted to enhance understanding and optimize the operational behavior of PV Soft costs resembles around 55% of the cost of a new solar PV installation which include labour costs, overhead, permits and might be transactions fees and sales tax. Labour: the cost for installing solar system varies depending on many factors. cost increases when a rooftop has unusual angles with Libya experiences an influence of political instability which significantly disturbs the lifestyle economics. Consequently, the growth of power demand and generated power is no longer met. They have obviously led to load shedding due to power generation deficit. In the meantime, Libya has an annual NREL analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems. NREL's PV cost benchmarking work uses a bottom-up It thus results in Tariff of 0.082 \$/kWh. This paper studies the potential of
