

Is Vietnam ready for a competitive bidding mechanism for solar energy? Vietnam is now developing a competitive bidding mechanism for solar energy to improve grid efficiency, promote competition, and ensure a stable energy supply, but it's currently in the works and hasn't been implemented yet. As such, Vietnam has been in a transition phase since the end of the FiT policy. Why should you invest in solar energy in Vietnam? Vietnam possesses favorable natural geography, strong market demand, and supportive policies that attract investors to solar energy projects. Given these developments and a forward-looking approach, the solar power sector is expected to capture the largest market share in Vietnam over the next five years. Can solar projects be financed in Vietnam? Owing to the current contractual structure proposed by the government, most solar projects in Vietnam are expected to be financed under a corporate loan or at 100 percent equity, with refinancing possible at a later stage. How many rooftop solar projects are there in Vietnam? Vietnam currently has approximately 103,000 rooftop solar power projects across residential, commercial, and industrial buildings, boasting a total installed capacity of over 9,500 MW. By 2030, Vietnam aims to significantly increase its solar capacity, projecting that 50 percent of households will have rooftop solar installations. Why is Vietnam a leader in solar energy development? The introduction of the FiT was a significant catalyst, driving a rapid increase in solar capacity and establishing Vietnam as a leader in Southeast Asia's renewable energy landscape. Although the FiT mechanism has since expired, new opportunities have emerged to sustain and expand solar energy development in the country. How does FiT affect solar energy development in Vietnam? FiT mechanisms set a fixed price for solar energy, overlooking regional variations in solar potential. This resulted in underdevelopment of solar PV in northern Vietnam, where solar radiation is low, while leading to overdevelopment in the south-central and southern regions, where solar radiation is high. This report was researched and prepared by the World Bank under the 'Solar Power Scale-Up Technical Assistance Project: Vietnam' [P162510], and the work was funded by the Energy Sector Management Assistance Program (ESMAP), a multi-donor trust funded program administered by the World Bank. This report was researched and prepared by the World Bank under the 'Solar Power Scale-Up Technical Assistance Project: Vietnam' [P162510], and the work was funded by the Energy Sector Management Assistance Program (ESMAP), a multi-donor trust funded program administered by the World Bank. To meet the country's target of having 12 GW of solar power capacity installed by 2030, the Government of Vietnam should consider a deployment strategy that builds experience, lowers costs, and maximizes economic benefits. This document has been developed based on the results of studies conducted by the World Bank. By 2030, according to the draft Power Development Plan (PDP) 82, coal is targeted to take up over 40% of electricity generation in the country and the current fossil-fuel dependent energy systems will make it very challenging for Viet Nam to pursue a sustainable development path that is aligned with its goal and is expected to increase substantially. It is a coal-dependent country but has strong wind and solar potential and has adopted supportive policies to boost clean energy investments. Vietnam's goal of achieving net-zero emissions by 2050 and reducing emissions by 15.8% (unconditionally) and 43.5% by 2030. Vietnam's solar

energy market, driven by high solar potential and strong government support, plays a key role in the country's "Net Zero" commitment, among other fields of green energy. For foreign investors, this presents a golden opportunity to tap into a rapidly growing sector with sustainable GHG emissions and increase renewables. Under the current scheme, the only options for further renewables development involve for battery storage is also planned. Recognizing the need for flexibility in power sources, the roadmap earmarks the development of 300 MW of flexible power sources substantially (13,000km transmission line, USD 32bn invest) by . PPA not linked to USD? BSS helps clients elevate their business to the next level through targeted initiatives. DEG supports up to 50% of the costs (capped at EUR 200,000 over 3 years) to underline our commitment to your success. Vietnam: Achieving 12 GW of Solar PV Deployment by This report was researched and prepared by the World Bank under the "Solar Power Scale-Up Technical Assistance Project: Vietnam" [P162510], and the work was funded by the Energy Rooftop solar power A potential solution in clean energy for There is no restriction of source of fund (local or international) that solar companies can mobilize for the solar project. Furthermore, there is import tariff exemption for imported solar equipment. Vietnam Renewables: Investment Priorities While Vietnam has more than 50% of its installed capacity in renewable technology (and approximately 30% of solar and wind), the rest of the generation stack is dominated by carbon Vietnam's Solar Energy Market: A Comprehensive Since , Vietnam has deployed a series of competitive and incentivized investment policies to bring utility-scale solar projects into operation, leading to a boom in solar development. Vietnam energy storage subsidy policy The Energy Storage Obligation (ESO) specifies that the percentage of total energy consumed from solar and/or wind, with or through energy storage should be set at 1% in the - Financing Renewable Energy Projects in Vietnam Renewable Energy Projects - Grid Congestion and Curtailment - Rising EPC Cost - Supply Chain Challenges (e.g. Inverters) - Environmental & Social Impact Vietnam Solar & Storage - Growth, Trend and Forecast For project bankability, we require consistent cashflow, curtailment, and a grid system, all of which must be developed by the government. Until we find solutions to the national grid problem and Vietnam solar energy Revolution: 16% Target by Vietnam solar energy is expanding rapidly, with plans to generate 16% of its power from solar by . Discover key projects and investments driving this growth! Vietnam proposes to boost solar capacity to 34 GW by Vietnam's Ministry of Industry and Trade has proposed a new revision of the country's draft National Electricity Development Plan for the - period, with a vision to
