

## solar plus storage cost breakdown in Canada 2030

What is solar-plus-storage? For solar-plus-storage--the pairing of solar photovoltaic (PV) and energy storage technologies--NREL researchers study and quantify the unique economic and grid benefits reaped by distributed and utility-scale systems. Much of NREL's current energy storage research is informing solar-plus-storage analysis. How does solar-plus-storage affect energy systems? Solar-plus-storage shifts some of the solar system's output to evening and night hours and provides other grid benefits. NREL employs a variety of analysis approaches to understand the factors that influence solar-plus-storage deployment and how solar-plus-storage will affect energy systems. How much solar energy does Canada need? Overall, Canada met 6.5% of its energy demand with wind and solar. CanREA states that Canada has a goal of commissioning 1,000 MW of new solar energy for with 18 new projects, 16 anticipated to be in Alberta. How much solar power does Canada have in ? According to the Canadian Renewable Energy Association (CanREA), the solar energy sector grew by 13.6% (288 MW) in . Canada now has a solar capacity of 2,399 MW, compared to 2,111 MW in . Canada's most valuable source for solar generation is Ontario, sharing almost 96% of its solar power. Is energy storage a viable option for utility-scale solar energy systems? Energy storage has become an increasingly common component of utility-scale solar energy systems in the United States. Much of NREL's analysis for this market segment focuses on the grid impacts of solar-plus-storage systems, though costs and benefits are also frequently considered. What solar systems will be available in ? Forecasts to for wind, solar photovoltaic (PV, both utility-scale and distributed), four-hour battery storage (both utility-scale and distributed) and hybrid solar and storage systems are shown in Figure 1. The scope and focus of the analysis is centered on applying this method to develop cost estimates for new solar, wind and energy storage deployments in Alberta and Ontario Important insights into the competitiveness of renewables resources in Canada today and in the future. 2. Approach Levelized Cost of Natural Gas is \$3.771 per MMBtu. Fuel Cost Projections are from the IESO APO . Carbon Tax is assumed to increase by \$15/ton from \$65/ton to \$170 by and stay This module provides current and forecasted capital costs of wind, solar and battery storage resources and the operational considerations associated with these resources in the context of a supply mix that will continue to evolve as a result of decarbonization and electrification. In summary, the While electricity price increases are anticipated in most provinces from -, results suggest that the falling cost of wind and solar alongside energy storage could drive down the price in the long term. The largest risk to these reductions in electricity price is a rising carbon price to For solar-plus-storage--the pairing of solar photovoltaic (PV) and energy storage technologies--NREL researchers study and quantify the unique economic and grid benefits reaped by distributed and utility-scale systems. Much of NREL's current energy storage research is informing solar-plus-storage According to the Canadian Renewable Energy Association (CanREA), the wind, solar, and energy storage sectors grew by 46% during the past 5 years (-) to a new total installed capacity of 24 GW at the end of - 18 GW of wind, 4 GW of solar, and 330 MW of energy storage. Solar energy LCOE and value-adjusted LCOE for solar PV plus battery storage, coal and natural gas in selected regions in the

Stated Policies Scenario, - - Chart and data by the International Energy Agency. Cost of Renewable Generation in Canada The scope and focus of the analysis is centered on applying this method to develop cost estimates for new solar, wind and energy storage deployments in Alberta and Ontario Annual Planning Outlook: Resource Costs and Trends This module provides current and forecasted capital costs of wind, solar and battery storage resources and the operational considerations associated with these resources in the context of A study on the energy storage market in Canada While electricity price increases are anticipated in most provinces from -, results suggest that the falling cost of wind and solar alongside energy storage could drive down the Solar-Plus-Storage Analysis | Solar Market Research NREL employs a variety of analysis approaches to understand the factors that influence solar-plus-storage deployment and how solar-plus-storage will affect energy systems. LCOE and value-adjusted LCOE for solar PV plus LCOE and value-adjusted LCOE for solar PV plus battery storage, coal and natural gas in selected regions in the Stated Policies Scenario, - - Chart and data by the International Energy Agency. Energy Storage in Canada: Recent Developments in a The energy storage market in Canada is poised for exponential growth. Increasing electricity demand to charge electric vehicles, industrial electrification, and the production of hydrogen are just some of the factors that Canada Energy Storage System Market Size and Forecasts The Canada Energy Storage System Market is projected to reach \$XX billion by , growing at a XX% CAGR. Growth is driven by increasing renewable energy adoption, Market Snapshot: Energy storage in Canada may multiply by The projects are identified as Pumped Storage Hydropower (PSH), Compressed Air Energy Storage (CAES), and Battery Energy Storage Systems (BESS), shown by coloured A snapshot of Canada's energy storage market in The result is a sense of powerful momentum building within the sector to accelerate the development and deployment of energy storage, particularly within the context PHOTOVOLTAIC TECHNOLOGY STATUS AND PROSPECTS The Canadian Solar Industries Association (CanSIA) is a member of the International Energy Agency Photovoltaic Power Systems Program (PVPS). In addition, CanSIA is a national trade
