What is solar-plus-storage? For solar-plus-storage--the pairing of solar photovoltaic (PV) and energy storage technologies--NREL researchers study and quantify the unique economic and grid benefits reaped by distributed and utility-scale systems. Much of NREL's current energy storage research is informing solar-plus-storage analysis. How does solar-plus-storage affect energy systems? Solar-plus-storage shifts some of the solar system's output to evening and night hours and provides other grid benefits. NREL employs a variety of analysis approaches to understand the factors that influence solar-plus-storage deployment and how solar-plus-storage will affect energy systems. Is energy storage a viable option for utility-scale solar energy systems? Energy storage has become an increasingly common component of utility-scale solar energy systems in the United States. Much of NREL's analysis for this market segment focuses on the grid impacts of solar-plus-storage systems, though costs and benefits are also frequently considered. Can NREL optimize energy storage operation for utility-scale solar-plus-storage systems? NREL researchers developed an open-source model to optimize energy storage operation for utility-scale solar-plus-storage systems in both alternating-current-coupled (left) and direct-current-coupled (right) configurations.

What is NREL's solar-plus-storage cost benchmarking work? This work has grown to include cost models for solar-plus-storage systems. NREL's PV cost benchmarking work uses a bottom-up approach. First, analysts create a set of steps required for system installation. Why is cost-benefit important in PV-BESS integrated energy systems? Cost-benefit has always been regarded as one of the vital factors for motivating PV-BESS integrated energy systems investment. Therefore, given the integrity of the project lifetime, an optimization model for evaluating sizing, operation simulation, and cost-benefit into the PV-BESS integrated energy systems is proposed. This is an executive summary of a study that evaluated the market applications and relative costs for paired solar plus storage systems, encompassing the multiple considerations a project designer needs to address in sizing such systems and configuring them to provide the intended grid services. LCOE and value-adjusted LCOE for solar PV plus battery storage, coal and natural gas in selected regions in the Stated Policies Scenario, - - Chart and data by the International Energy Agency. NV Energy's solicitation for solar capacity was designed specifically to attract solar+storage projects. The PPA structure pays a price during system peak hours (4 to 9 pm) that is 6.5x higher than the price paid for output during other hours. This ensures that the projects will provide capacity. The costs of residential solar-plus-storage have already
