

# successful bid price of lithium ion storage project in Yemen 2025

Why did lithium-ion battery prices drop in 2024? Overall, the price drop for lithium-ion battery cells in 2024 was greater compared with that seen in battery metal prices, indicating that margins for battery manufacturers were being squeezed. Therefore, suppliers are expected to push for price increases to mitigate losses with global demand for EVs and energy storage expected to grow in 2025. Will lithium ion battery prices go down in 2025? After tumbling to record low in 2024 on the back of lower metal costs and increased scale, lithium-ion battery prices are expected to enter a period of stabilization. The rapid decrease in lithium ion battery prices seen in previous years is likely to be slowed down in 2025 due to an uptick in battery material costs. Will Li ion phosphate support battery prices in 2025? This is anticipated to support the prices of key battery materials--such as [lithium iron phosphate] LFP, li-ion battery copper foil, and electrolytes--thereby stabilizing average battery cell prices in the first quarter of 2025," TrendForce says. How will rising raw material costs affect production costs in 2025? Materials such as LFP, li-ion battery copper foil, and electrolytes, which have caused sustained losses for suppliers, saw slight price rebounds in December 2024. In near future, rising raw material costs will call for greater efforts to control overall production expenses, TrendForce says.
