What is nickel manganese cobalt (NMC) battery market?The nickel manganese cobalt (NMC) battery market has been observing significant growth due to growing demand for efficient batteries from different industrial applications such as EV, ESS and many more. This is encouraging several innovative initiations in the industry. Solid-state batteries being one of the advances seen in the field. Who are the key players in the nickel manganese cobalt (NMC) battery market?Market players including CATL, Clarios, Exide Technologies, Tesla, Saft are the top 5 companies in the nickel manganese cobalt (NMC) battery market. The key 5 players hold nearly 40% of market share. Among these, CATL is one of the major share holding player in the market. Will manganese demand outpace the demand for battery-grade materials?Meanwhile, the supply of manganese is projected to grow moderately through , but an increasing demand for battery-grade material is likely to outpace supply, requiring the development of new refineries. Can lithiated nickel manganese cobalt oxide be produced by co-precipitation?A process model has been developed and used to study the production process of a common lithium-ion cathode material, lithiated nickel manganese cobalt oxide, using the co-precipitation method. The process was simulated for a plant producing kg day-1. How is lithium nickel manganese cobalt oxide powder produced?Schematic of a process for the production of lithium nickel manganese cobalt oxide powder. The product stream, a slurry of solid precipitates in a solution, is phase separated, and then filtered and washed several times. The filtration may be done in a rotary vacuum filter followed by drying in a spray dryer. Scope 3 Magazine explores the supply chain sustainability of lithium, nickel, cobalt and manganese (Credit: Wikimedia Commons) The rapid rise of electric vehicles (EVs) and renewable energy technologies has placed unprecedented strain on the supply chains of critical raw materials. As the latest Lithium-ion (Li-ion) EV battery prices have decreased dramatically over the past few years, mainly due to the fall in prices of critical battery metals: Lithium, cobalt and nickel. For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in to about \$30,000 in . McKinsey research details how demand for essential materials is projected to surpass supply soon, leading to potential shortages, fluctuating prices and increased investment needs.
