

successful bid price of rooftop solar storage project in Australia 2025

How many rooftop solar installations are there in Australia? In the first quarter of 2025, the capacity of rooftop solar installations for homes and businesses surpassed 26 GW, with over 4.1 million photovoltaic systems now operational across the country, according to data from the Clean Energy Regulator (CER). With 3.2 GW of new capacity added, rooftop solar led the energy transition in 2025 - almost reaching the rooftop solar record of 2024. It was the fifth year running that more than 300,000 rooftop solar installations took place, and rooftop solar now generates over 12% of Australia's electricity. How does rooftop solar impact energy prices? The report highlights that NEM wholesale prices were 26 per cent lower than the previous quarter, demonstrating the positive impact of rooftop solar on energy affordability for households, businesses, and industries connected to the grid. While rooftop solar was driving down energy prices, the cost of gas saw an increase. When did rooftop solar become a trend in Australia? Drawing on the theory, rooftop solar adoption in Australia took over nine years for rooftop solar to reach just 2.5 per cent of dwellings (from April 2015 to October 2024), marking the "Innovation" stage. That's roughly 240,000 rooftop solar installations out of approximately 9.1 million dwellings across Australia. Is rooftop solar a good idea in Australia? Tickler notes the outsized performance of rooftop solar has long been true in Australia, but this has not extended to other clean technologies, such as batteries. But here, too, the story is rapidly changing thanks to government subsidies that have put a rocket under the demand for household batteries. How many rooftop solar installations are there in Australia? Rooftop solar raced past 4 million installations on households and small businesses. With 3.2 GW of new capacity added, rooftop solar led the energy transition in 2025 - almost reaching the rooftop solar record of 2024. In the first quarter of 2025, the capacity of rooftop solar installations for homes and businesses surpassed 26 GW, with over 4.1 million photovoltaic systems now operational across the country, according to data from the Clean Energy Regulator (CER). In the first quarter of 2025, the capacity of rooftop solar installations for homes and businesses surpassed 26 GW, with over 4.1 million photovoltaic systems now operational across the country, according to data from the Clean Energy Regulator (CER). Continued growth. In Q1 2025, NT reached the highest average system size in the country at 15.5 kW. The Northern Territory has a unique profile - it accounts for just 0.3 per cent of total national capacity and 0.2 per cent of installations. Despite having a relatively small number of systems, the installations include \$9 billion for new large-scale generation projects - the highest single year ever, and the highest since the boom of 2022. That includes \$5.8 billion of new investment commitments for wind projects - the highest yearly figure since the Clean Energy Council began reporting data in 2012. As Australia's energy transition hits turbulence, a quiet but fundamental shift is underway. Faced with long delays, huge cost blowouts and staunch opposition from some quarters, the push to build large-scale projects from wind farms to transmission lines is becoming increasingly fraught. In the latest Annual SunWiz Australian PV Market Report reveals a dynamic year for the sector, with significant growth in commercial solar installations counterbalanced by a decline in the residential market. Here are the key insights from the report: Despite challenging market

successful bid price of rooftop solar storage project in Australia 2025

conditions, 4.7GW The utility-scale sector generated 1,028.4GWh of electricity, while the rooftop sector generated 1,446GWh, contributing to a spike in rooftop solar prices to AU\$225.57/MWh (US\$147.53/MWh) on 26 June . Combined, rooftop and utility-scale generation in June exceeded that of the previous February 6, by Sophie Vorrath Leave a Comment A total of around 234 megawatts of new rooftop solar was installed on homes and businesses in the first month of , delivering the second-best January on record, behind the bumper year of . According to the latest data from industry analysts SOLAR REPORT S In the first quarter of , the capacity of rooftop solar installations for homes and businesses surpassed 26 GW, with over 4.1 million photovoltaic systems now operational across the Clean Energy Australia report | Clean Energy For the second consecutive quarter in Australia has seen weaker investment in new renewable energy and storage projects, following subdued investor confidence earlier this year. Australia's rooftop solar and batteries now the main game as For its part, AEMO acknowledges the escalations in the costs of transmission projects and says it will "revisit" some projects to see whether they should still go ahead. The State of Solar in Australia: Key Takeaways from the The SunWiz PV Market Report provides valuable insights into the state of Australia's solar industry. While residential solar faced headwinds, the commercial sector saw unparalleled NEM data spotlight: rooftop solar prices spike to Prices for utility-scale and rooftop solar remained relatively consistent, except for an anomaly on 26 June, which was also the best day for cumulative solar generation. Rooftop solar installs off and running in , with According to the latest data from industry analysts SunWiz, a strong showing from the commercial sector helped lift what is traditional a quiet time of the year for new installs in Australia. State of the Solar Industry in Australia - Industry ReportHowever, challenges such as grid integration, battery storage scalability, and community resistance to large-scale solar farms remain. This report provides a deep dive into AEMO | Rooftop PV and battery storageAEMO expects a proportion of new storage to be aggregated and used for price hedging by retailers and provision of ancillary services, further increasing the value streams from innovation and accelerating the rate of uptake.
